## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see pages 8-9, filed 10-29-08, with respect to obviousness rejection of record have been fully considered and are persuasive. The previous rejection of record has been withdrawn.

### ***Allowable Subject Matter***

2. Claims 1-22, 24, 26-32, 34-36 are allowed.

### ***Reasons for allowance***

3. The following is an examiner's statement of reasons for allowance:

The present invention includes independent claims 1, 22, 26, and 30. Claims 1, 22, 26, and 30 all recite a method of making retroreflective elements.

Palmquist et al is considered the closest prior art. Palmquist et al discloses a method of making retroreflective elements. A plurality of core particles is provided, and coating of the particles with an unsolidified polymeric composition forming coated particles this then performed. The coated particles with optical elements is combined (by mechanical mixing) such that optical elements are embedded in the unsolidified

polymeric composition and solidifying the polymeric composition forming retroreflective element.

Palmquist et al does not disclose the claimed combination including:

In claim 1:

coating the particles with an unsolidified crosslinkable polymeric composition forming coated particles;

mechanically mixing the coated particles with optical elements in a continuous process by means of at least one rotating mixing member such that optical elements are embedded in the unsolidified crosslinkable polymeric composition; and

solidifying the crosslinkable polymeric composition by curing forming retroreflective elements.

In claim 22:

providing a plurality of core particles having surfaces comprising an unsolidified crosslinkable polymeric composition;

mechanically mixing the core particles with optical elements by means of a device comprising at least one rotating mixing member selected from the group consisting of a disc, an extruder screw, co-rotating blades, counter-rotating blades, and a grinding plate, such that optical elements are embedded in the unsolidified crosslinkable polymeric composition; and

solidifying the crosslinkable polymeric composition by curing forming retroreflective elements.

In claim 26:

providing a plurality of inorganic core particles;

coating the particles with an unsolidified polymeric composition forming coated core particles;

mechanically mixing the coated particles with second particles by means of a device comprising at least one rotating mixing member selected from the group consisting of a disc, an extruder screw, co-rotating blades, counter-rotating blades, and a grinding plate, such that second particles are embedded in the unsolidified polymeric composition of the core particles; and

solidifying the polymeric composition.

In claim 30:

providing a plurality of inorganic core particles;

coating the particles with an unsolidified polymeric composition forming coated core particles;

mechanically mixing the coated particles with second particles by means of a device comprising at least one rotating mixing member selected from the group

consisting of a disc, an extruder screw, co-rotating blades, counter-rotating blades, and a grinding plate, such that second particles are embedded in the unsolidified polymeric composition of the core particles; and  
solidifying the polymeric composition.

For these reasons claims 1, 22, 26, and 30 are deemed to be allowable over the prior art of record, and claims 2-21, 24, 27-28, 31-32, 34-36 are allowable by dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
